- Aitzaz (2501805@students.au.edu.pk) - Build Upgrades Module
- Haroon (haroonikram2512@gmail.com) - Build Configurator

Project Overview:

A PC part picker and configurator built with Java 17, Swing GUI, and MariaDB. Users can browse 78+ components across 6 categories (CPU, GPU, RAM, Storage, PSU, Motherboard), build custom PCs with compatibility filtering, upgrade existing builds, purchase builds with receipts, and get AI-powered build suggestions via an integrated chat bot.

Tech Stack:

- Java 17 + Swing GUI
- MariaDB 10.4 (XAMPP)
- JDBC (mysql-connector-j-9.7.0)
- NetBeans Ant build system
- OpenAI-compatible API (KoboldCPP) for AI chat

Submission Structure:

Project/

- +-- Source_Code/ -> Java source files (src/ directory)
- +-- Database/ -> SQL schema and seed data
- +-- Report/ -> Full project report
- +-- Output_Screenshots/ -> Application screenshots
- +-- Analysis/ -> ER diagram and architecture docs
- +-- Presentation/ -> Presentation materials
- +-- Contribution_Details/ -> Individual contribution records
- +-- README.txt -> This file

Setup Instructions:

1. Install XAMPP and start MySQL
2. Import database: `mysql -u root < Database/pc_build_store.sql`
3. Build: `ant compile` (or use NetBeans)
4. Run: `ant run` (or run Main.java)
